

Our Anti-Aging Solutions Never Get Old.™

EndiMoist™ Sodium Hyaluronate

INCI NAME: SODIUM HYALURONATE

Introducing EndiMoist™ high purity Sodium Hyaluronate. The EndiMoist range offers a variety of Sodium Hyaluronate products with different molecular weights for diverse performance and application needs. **EndiMoist™ MHA** is the new generation Oligo Sodium Hyaluronate and is produced by enzymatic degradation. This innovative method results in higher safety and more biological actives. **EndiMoist™ FG** is a food grade Sodium Hyaluronate that is used as an ingredient in food and nutrition products.

EndiMoist™ Cosmetic Grade Sodium Hyaluronate

PRODUCT NAME	DESCRIPTION	MOLECULAR WEIGHT	PHYSICAL FORM
EndiMoist™ HMW	High Molecular Weight Sodium Hyaluronate	>1,800 kDa	Solid
EndiMoist™ HA	Sodium Hyaluronate	1,000 kDa - 1,800 kDa	Solid
EndiMoist™ LMW	Low Molecular Weight Sodium Hyaluronate	10 kDa - 1,000 kDa	Solid
EndiMoist™ LMW 20-40	Low Molecular Weight Sodium Hyaluronate	200 kDa - 400 kDa	Solid
EndiMoist™ LMW-10	Oligo Hyaluronic Acid	<10 kDa	Solid
EndiMoist™ MHA	HA-Oligo degraded by Hyaluronidase	<10 kDa	Solid
EndiMoist™ HA Solution	Sodium Hyaluronate 1% Solution		Liquid
EndiMoist™ LMW Solution	Low Molecular Weight Sodium Hyaluronate 1% Solution		Liquid

EndiMoist™ Food Grade Sodium Hyaluronate

EndiMoist™ FG	Food Grade Sodium Hyaluronate	200 kDa - 600 kDa	Solid

EndiMoist™ is a trademark of Coast Southwest, Inc.

EndiMoist™ Cosmetic Grade Sodium Hyaluronate

FEATURES AND BENEFITS

Natural moisturizer

Imparts softness and supple feel

Assists in skin repair

High purity - solid forms are ≥91.0%

Non-GMO and Ecocert (powder)

Non animal-derived

END USES

Skin Care Products - cream, emulsion, lotion, gel, facial mask

Makeup Products - lipstick, eye shadow, foundation, blush

Cleansing Products - facial cleanser, body wash

Hair Care Products - shampoo, hair conditioner, styling gel, hair restorer

APPLICATIONS BY PRODUCT

EndiMoist HMW (>1,800 kDa) - Hydrates the skin's surface and protects the skin barrier against moisture loss with long-term efficacy. Permeates the skin at a slower rate. Used in skin care and color cosmetic products.

EndiMoist HA (1,000 kDa - 1,800 kDa) - Highly effective for skin hydration and elasticity; provides good lubricity. Ideal for longer wear protection in body lotions and anti-aging products.

EndiMoist LMW (10 kDa - 1,000 kDa) - Penetrates the dermis quickly and has high moisture retention. Helps preserve the skin's smoothness, suppleness, and elasticity. Used for anti-aging serums, creams, and lotions.

EndiMoist MHA (<10 kDa) - A new generation Oligo Sodium Hyaluronate that is produced by enzymatic degradation, resulting in higher purity, anti-oxidant activity, and moisture retention. The low molecular weight penetrates the skin and nourishes it deeply. It is also effective in helping to repair skin cells from ultra violet irradiation damage. Used for anti-aging, moisturizing, and after sun products.

EndiMoist HA Solution - The 1% solution enhances the feel and texture of creams, lotions, and color products. Offered in high and low molecular weights. Used in skin care, color cosmetic, and hair care applications.
