

**ANTI-AGING
SOLUTIONS
SUMMARY**

CoastSouthwest[™]
Fluid Thinking. Innovative Solutions.[™]

Our Anti-Aging Solutions Never Get Old.™

A fundamental desire of humans is to remain forever young. While there is no fountain of youth to reverse aging magically, cosmetic science allows women and men to retain their youthful looks through the use of innovative skin care products. The demand for more and better solutions has driven an explosive expansion of the anti-aging industry worldwide.

At Coast Southwest, our advanced anti-aging actives allow you to scientifically diminish the appearance of fine lines and wrinkles, restore skin resilience, and improve firmness, effectively reducing the signs of aging.

EndiMoist™

INCI NAME: SODIUM HYALURONATE

EndiMoist is a range of high purity cosmetic grade sodium hyaluronate (HA) in a variety of molecular weights (<10 kDa -1,800 kDa). **EndiMoist MHA** is the new generation oligo sodium hyaluronate and is produced by enzymatic degradation. This innovative method results in higher safety and more biological actives.

Fiflow®

INCI NAME: PERFLUOROHEXANE (AND) PERFLUOROPERHYDROPHENANTHRENE (AND) PERFLUORODECALIN (AND) PERFLUORODIMETHYLCYCLOHEXANE

Fiflow products are anti-aging and anti-cellulite skin care actives based on fully fluorinated perfluorocarbons which carry oxygen to the skin.

Fluorinated perfluorocarbons are safe, stable, inert materials with exceptionally fast skin penetration. **Fiflow** products function as dermal fillers and di-electric muscle relaxants delivering both immediate results and long-term effects. **Fiflow's** oxygen delivery system hydrates, improves skin metabolism, and promotes skin renewal.

GlyAcid®

INCI NAME: GLYCOLIC ACID

GlyAcid is the new global benchmark for high purity glycolic acid. CrossChem's state-of-the-art process produces a personal care ingredient free of formaldehyde and formic acid.

Although manufactured through a proprietary saponification technology, **GlyAcid** delivers the same glycolic acid molecule currently used in personal care products across the globe... minus the impurities.

Now formulators can confidently replace the glycolic acid they are using with an ingredient that is more pure.

Olivatis™ Emulsifiers

Olivatis is a family of high-performing natural emulsifiers derived from olive oil. These novel ingredients impart a luxurious skin feel and elegant texture while providing product stability to the finished product.

Olive oil has long been a basic ingredient for herbalist and cosmetic preparations due to its lubricating, restructuring, and skin protecting properties. This new generation of emulsifiers delivers the ultimate in olive oil-based chemistry.

Olivatis Emulsifiers are natural, sustainable, and PEG-free. They are ideal for nonionic systems.

Cayoma® Active Ingredients

Naturally derived actives for skin care applications that can be used in low concentration.

Cayoma Olive is a strong anti-oxidant and anti-inflammatory that protects against cell damage, and provides UV protection and skin lightening properties that decrease melanin production significantly.

Cayoma Grapefruit inhibits glycation activity and detoxifies skin cells for improved function.

Cayoma Green Coffee stimulates the synthesis of collagen, elastin and glycosaminoglycane and prevents epidermis dryness. **Cayoma** Ginkgo provides cell protection against oxidative stress and inflammation.

AllyEster™

INCI NAME: ETHYL PALMATE

AllyEster is an extremely versatile 100 percent plant-derived ingredient. A colorless elegant moisturizer with a fine silky feel, **AllyEster** is a great additive for shine and moisturization in shampoos, conditioners, lipsticks and lip balms (with no after taste). **AllyEster's** low molecular weight makes it very permeable through the skin. By reducing tackiness, **AllyEster** is a great solubilizer for oil phase esters, oils, and waxes. This ingredient is a safe and non-irritating replacement for silicones, isopropyl palmitate, or isopropyl myristate.

Moringa Seed Oil

INCI NAME: MORINGA OLEIFERA SEED OIL

Moringa Seed Oil is naturally extracted from the seeds of the Moringa Oleifera tree. With its impressive oleic acid content, **Moringa Seed Oil** penetrates deeply into the skin, delivering vital nutrients and also helping the skin and hair retain moisture.

Moringa Seed Oil is clear and odorless. Thanks to the numerous antioxidants it contains, the oil does not become rancid for several years after it is produced. Benefits include skin care and rejuvenation, stronger and healthier hair, wrinkle reduction, and skin blemish removal.

Keep your actives functioning...

Endicare® ETP Cold Process Emulsifiers

The **Endicare ETP** series is a family of innovative Liquid Dispersion Polymers that are highly effective, easy-to-use thickening, emulsifying, suspending, and stabilizing agents. They are ready-to-use, provide instant viscosity with the addition of water, do not require neutralization, heat, or energy to create stable emulsions, and save valuable processing time and manufacturing costs.

...and your anti-aging formulations preserved.

Sharon Biomix Blends

Biomix preservative blends are a range of broad spectrum products containing unique, organic citrus extracts, designed for the preservation of personal care products. They are characterized by good solubility in water and other commonly used solvents, good tolerance to elevated temperatures, and excellent performance across a wide pH range. The **Biomix** family of products allows cosmetic formulators to meet the world-wide growing demand for milder and greener cosmetic formulations without compromising on performance.
